SPAJANJE PROFILA KUTNIM SPOJNICAMA
CONNECTING PROFILE WITH CORNER BRACKETS

1. Sve površine koje se spajaju očistiti i odmastiti odgovarajućim sredstvom (npr. Teroson VR 20 ili FL+).
2. Premazati površine koje se spajaju ljepilom (npr. Teroson MS 939) .
3. Ljepilo ušpricati u komoru za kutnik - po opsegu komore
4. Profile s kutnikom izravnati i spojiti
5. Dio ljepila što iscuri između rezova očistiti sredstvom za čišćenje i odmašćivanje (npr. Teroson VR 20 ili FL+).

1. Surface that are connecting - clean and degreased the cut with suitable products (e.g. Teroson VR 20 ili FL+).
2. Smear surfaces that are connecting with adhesive (e.g. Teroson MS 939) .
3. Spurt adhesive into chambers for the corner bracket (on chamber circumference)
4. Level profiles with corner brackets and connect.
5. Leaking adhesive that comes from the joints remove with cleaning abd degrease products (e.g. Teroson VR 20 ili FL+).

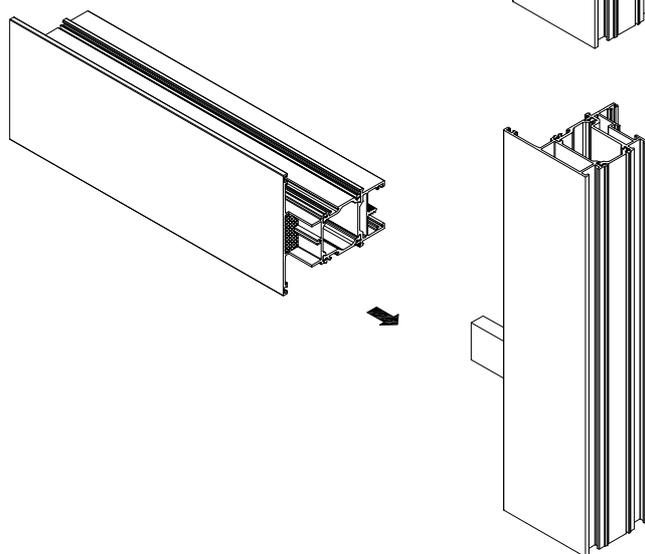

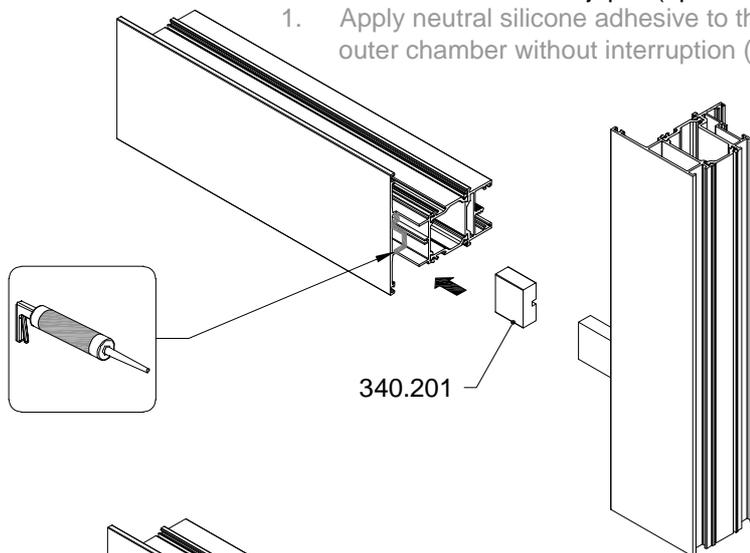

MONTAŽA XPS BARIJERA INSTALLATION XPS BARRIER

- Po unutarnjem obodu vanjske komore bez prekida primjeniti neutralno silikonsko lijepilo (npr. Teroson MS 939)
- Apply neutral silicone adhesive to the inner circumference of the outer chamber without interruption (eg. Teroson MS 939)

MONTAŽA ELEMENTA ZA UGRADNJU

1. Na profilu rama, kroz oba poliamida bušiti rupu $\varnothing 13$ mm na udaljenosti 28.2 od kraja vanjske strane profila.
2. PVC vijak sa pločicom dovesti u položaj otvora $\varnothing 13$ mm
3. Vijcima 4.8x22 /DIN 7981/ pločicu s PVC vijkom pričvrstiti za stjenku profila
4. Imbus ključem 6 mm, sa unutarnje strane profila, kroz otvor $\varnothing 13$ mm zaokretanjem PVC vijka dovodimo prozor u *ispravan* položaj
5. Vijkom 430.184 /FFS 7.5x62/ kroz profil i PVC vijak, fiksirati položaj prozora
6. Element za ugradnju (521.107) montirati na udaljenosti cca 250 mm od krajeva profila rama, a razmak između 2 elementa za ugradnju je max. 500 mm.

MONTAGE OF ELEMENTS FOR INSTALLATION

1. On frame profile drill $\varnothing 13$ mm hole with 28.2 mm distance from the end of exterior side of profile
2. PVC screw with plate bring in position of $\varnothing 13$ mm hole
3. With screws 4.8x22 /DIN 7981/ fasten the PVC plate with screw on the profile wall
4. Rotate the PVC screw from the interior side of frame profile with Allen key 6 mm through $\varnothing 13$ mm hole bring the window in right position
5. With screw 430.184 /FFS 7.5x62/ through frame profile and PVC screw, fix window in the right position
6. Element for installation (521.107) mounted at a distance of about 250 mm from the ends of the profile, and the distance between the two elements for installation is max. 500 mm.

UPORABA BRTVE 314.001

-Ako je prozor izložen većoj količini padalina, postoji mogućnost da dođe do "zagušenja" /otvori za kondenzat na profilu rama ne mogu da odvedu sve kapljevine koje uđu u za to predviđeni prostor u profilu rama/, te postoji mogućnost ulaska vode u unutarnji dio profila tj. u objekt. Da bi se ovo spriječilo preporučuje se uporaba brtve 314.001.

-Brtvu 314.001 umetnuti po opsegu prozora osim u gornjem pojasu gdje se prekida radi omogućavanja ventilacije prozora /vidjeti skicu/.

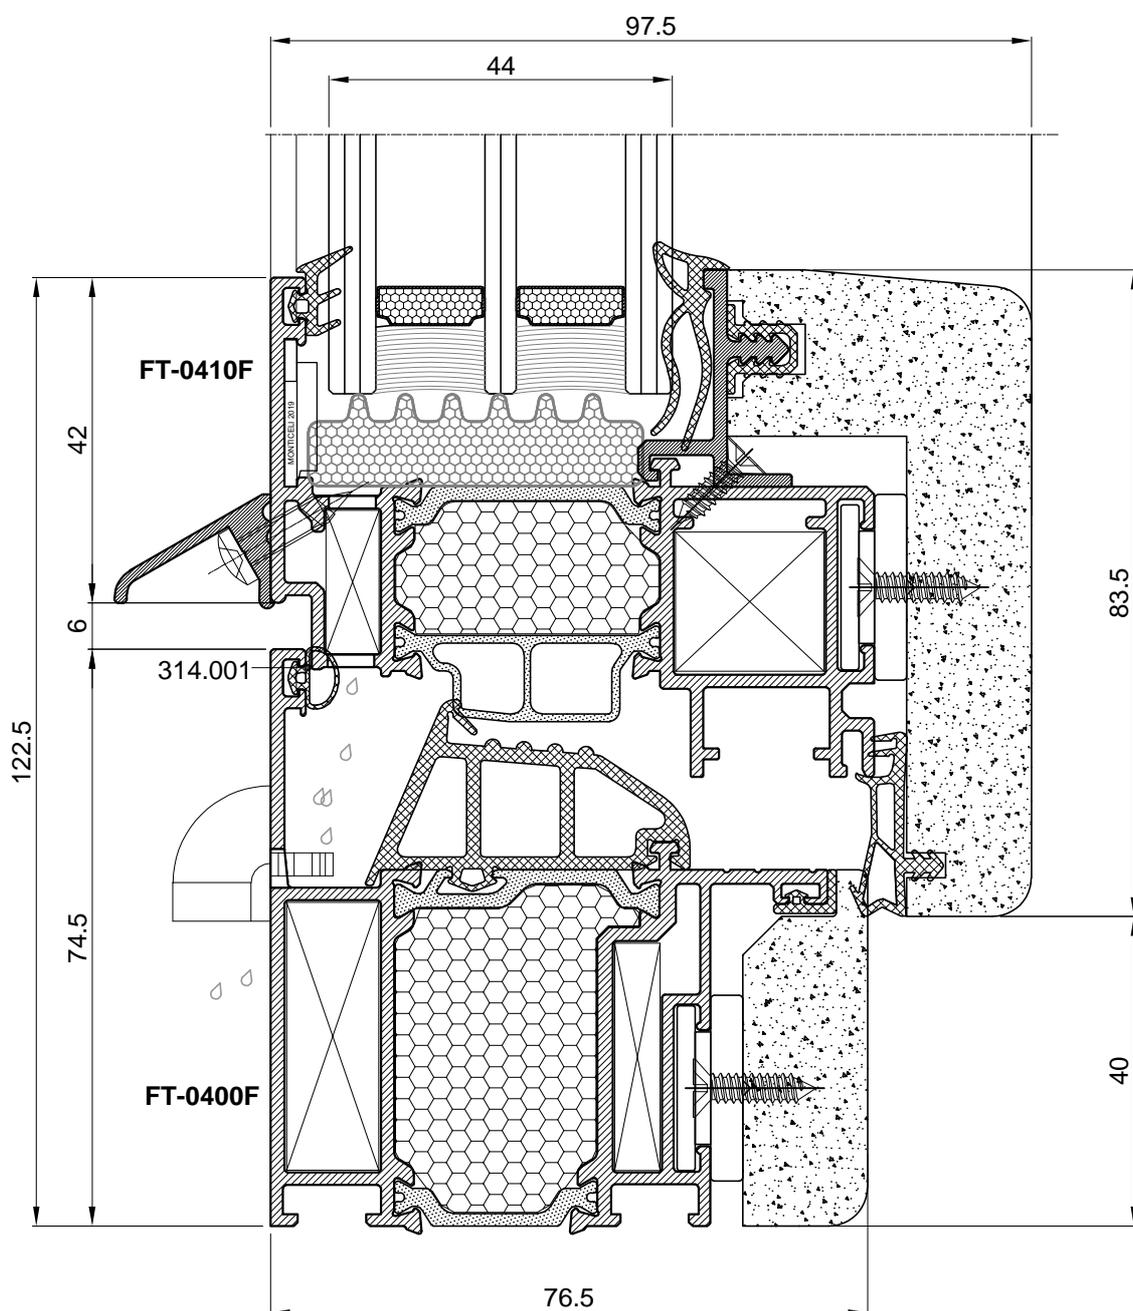

-Korištenje brtve 314.001 zahtjeva uporabu kutnika 730.001 umjesto kutnika 730.002

APPLIANCE OF GASKET 314.001

-If the window is exposed to a larger amount of precipitation, there is possibility for "congestion" /opening for condensate on frame profile can't take out all the liquids that enter the appropriated space in frame profile/, and possibility of entering liquids into interior part of profile ie. into object. Hence, for prevention, gasket 314.001 is recommended.

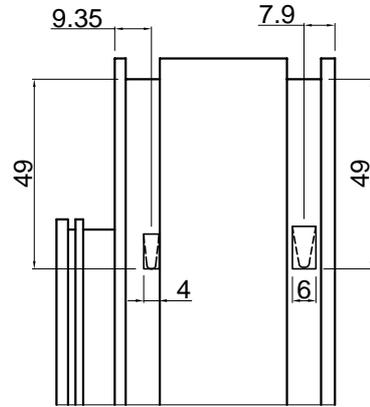

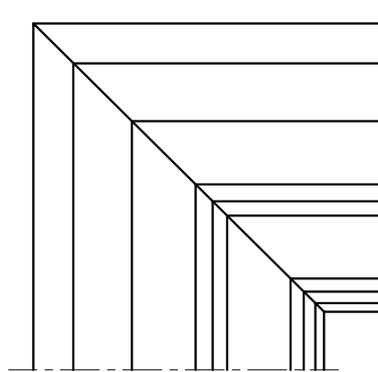

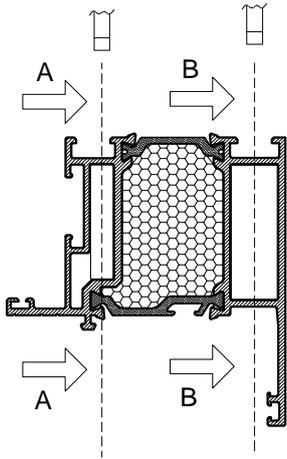

-Place gasket 314.001 around window circumference except in upper portion where it is broken because of window ventilation /see scheme/.

-Usage of gasket 314.001 demands usage of 730.001 corner bracket instead of 730.002
